

Information Officer Report – April 2022

Summary:

1. **MCIS Software:** No new updates this period.
2. **Data Analytics and Reporting:**
Power BI Dashboard development continues, prioritizing organizational information needs that are tied to the Beacon Transition and/or the MDHHS settlement agreement.
3. **FY22 data reporting to MDHHS:**

FY22 Encounter reporting overall is showing good volumes through February, which would be expected at this point in time. Please see also the encounter graphs attached.

FY22 BH-TEDS: BH-TEDS reporting volumes for FY22 related records are coming in with good volume from all CMHs. Our first set of BHTEDS FY22 completeness measurements were just received from MDHHS. We continue to perform above the 95% compliance threshold on SUD BHTEDS completeness but below target on the Mental Health and Crisis Only measures. The new EMR system in place now at HealthWest is expected bring improvements in future measurement cycles.

4. **HSAG Performance Measure Validation (PMV) Audit:**
Materials are being prepared now for submission to HSAG in preparation for our annual **Performance Measure Validation (PMV) Audit**. This audit includes a thorough review of all the IT systems (and business processes associated with them) which gather and submit data used in calculating the quality indicators used in the **Michigan Mission Based Performance Indicator System (MMBPIS)**. Our materials will be submitted to HSAG by April 22nd, and our audit review with them will be on June 6th.
